Question Name:

Concept: Disability status

Question Text:

Universe: All respondents.

Note: This derived variable indicates whether or not a person has a disability.

A person is defined as having a disability if he or she has one or more of the following types of disability: seeing (DVIS_FL), hearing (DHEAR_FL), mobility (DMOB_FL), flexibility (DFLEX_FL), dexterity (DDEX_FL), pain-related (DPAIN_FL), learning (DLRN_FL), developmental (DDEV_FL), memory (DMEM_FL), mental health-related (DMENT_FL), or unknown (DUNK_FL). Please refer to each specific DV for additional information.

NOTE: This variable has no residual 'not stated' category. Persons who do not have at least one disability, as defined by the specific disability status variables, are considered not to have a disability.

Question Name:

Concept: Global disability severity class

Question Text:

Universe: All respondents.

Note: Based on the global severity score, severity classes were established. Severity scores increase with the number of disability types, the level of difficulty associated with the disability and the frequency of the activity limitation. The name assigned to each class is simply intended to facilitate use of the severity score. It is not a label or judgement concerning the person's level of disability. The classes should be interpreted as follows: people in class 1 have a less severe disability than people in class 2; the latter have a less severe disability than people in class 3; and so on.

Persons without a disability (DDIS_FL=2) have a value 0 for this variable, which should be treated as not applicable.

Persons with a disability but for whom the severity is unknown (key questions were not answered making it impossible to derive the score, and hence the class) have a value of 5.

For more information on severity scores and classes, please refer to the Canadian

Survey on Disability (CSD), 2017: Concepts and Methods Guide.
